PT. CENTRA ENERGI OPTIMA

PT. CENTRA ENERGI OPTIMA
GOLD MINING, REFINING, AND TRADING

Overview

Gold mining in Indonesia began more than a thousand years ago with the arrival of immigrants from China who mined gold in several areas, followed by the Hindu Age, Dutch and Japanese occupation. During the Dutch colonial era (1600 – 1942) the development of gold mining was very limited. Several gold ore reserves discovered during this period were in the Lebong area, namely Lebong Donok and Lebong Tandai, Bengkulu Province. Another gold deposit discovered was in the South Banten area known as the Cikotok gold mine owned by PT Aneka Tambang. Apart from that, there were also other relatively small discoveries of gold deposits.

In 1939, total gold metal production was recorded at 2.5 tons, half of which came from Lebong Tandai. During World War II, all of these gold mines were closed and after the war only a few mines were reopened including the Cikotok Gold Mine. Gold production since the end of World War II until the mid-1980s did not show a significant increase. Total recorded production in 1985 amounted to around 2.16 tons, with more than 90% of this amount being a by-product of copper concentrate produced by PT Freeport Indonesia in Papua (formerly Irian Jaya)

Profile

PT. Centra ENERGI Optima is a company engaged in managing business units within the gold mining industry. We began our operations in mining, trading, and gold refining, with a primary focus on eastern Indonesia, particularly in Nabire, Papua. As widely recognized, Papua holds significant potential as one of Indonesia's largest gold-producing regions. Our gold mining operations are based in Nabire, Papua, with an ongoing process to obtain a 5,000-hectare mining concession.

In 2024, we initiated exploration mapping in collaboration with world-class companies to optimize our mining potential. Through these efforts, we aim to maximize gold production and make a meaningful contribution to national economic growth, particularly benefiting the people of Nabire and its surrounding areas.

Vision

Creating high-quality gold products with a purity of up to 99.99%

Menciptakan produk emas yang berkualitas tinggi mencapai 99.99%

Mission

Become a leading gold company from the region that has national network and international brand

Menjadi Perusahaan emas terkemuka yang memiliki jaringan baik nasional maupun internasional

Why Choose Us?

PT. Centra ENERGI Optima was established in 2022 as a collaborative initiative with the local community of one of the indigenous tribes in Nabire, Central Papua. The customary land in this region has traditionally been managed by the tribe, preserving its cultural and historical heritage. Despite various challenges and limitations, we remain steadfast in our commitment to empowering the indigenous people of Papua, particularly the Auparay Tribe, to rise and thrive. Over time, our shared vision led us to officially establish a unified business entity.

This unwavering spirit culminated in the formal founding of PT. Centra ENERGI Optima, a reflection of our dedication as a community of the Auparay Tribe from the easternmost region of Indonesia to contribute to the nation's progress. Our ultimate aspiration is to realize the noble vision of the Auparay Tribe, fostering sustainable growth and success in alignment with our collective hopes and ambitions.

Sincerely,

Yan Felix Auparay

Management Message

GOLD remains GOLD

*GOLD is...If placed with sand, GOLD remains GOLD
Even if placed with mud, GOLD remains GOLD,
WHICH DOES NOT DECREASE IN VALUE.*

*People will COMPETE TO SEEK and FIND IT
wherever GOLD EXISTS, even in dirty places,
because ITS VALUE DOES NOT CHANGE.Because
GOLD is honest money, it is not favored by
dishonest people.*

Indra Fithani AR
President Director

Management Message

Mining gold without harming the environment.

Gold is more valuable than wood, but when we are about to drown, it is the wood we hold onto, and the gold is discarded. So, never underestimate anyone, even if they have no wealth.

Ritho Himawan

Mining & Production Director

Management Message

The best accountants don't just look at the numbers. They see the potential for financial transformation

Yerisvo Hendra

Finance & Accounting Director

Our Products

Gold Granules

Granular gold is a type of gold that looks like powder and has a very fine texture. This type of gold is rarely found for investors to buy because it is more often used by gold artisans. With this powdered gold, artisans process it into derivative products with a mixture of gold, one of which is to make jewelry with low grades and low prices

Gold Bar

Types of gold bars are the most widely used gold for investment. Gold bullion is also often referred to as bullion. Gold which is often used for this investment has a very pure gold content, up to 99.99%. Not just any company can produce this gold because it has to pass certain certifications. The weight of gold bars also varies, ranging from 1 gram, 5 grams, up to 1,000 grams

Gold Nugget

Gold Nugget is a naturally occurring piece of gold with an irregular shape and bright yellow color. It is typically found in riverbeds, streams, or placer deposits due to natural erosion. Gold nuggets vary in size and purity, often containing traces of other minerals. They are highly valued for jewelry, investment, and as collectibles.
